

ASX ANNOUNCEMENT

7 May 2015

dorsaVi signs first OHS deal in the US with Caterpillar Inc.

Melbourne, Australia: Medical device company dorsaVi Ltd (ASX: DVL) is pleased to announce that it has secured its first OHS contract within the United States with construction and mining equipment manufacturer, Caterpillar Inc.

Caterpillar's seals metal casting facility in Toccoa, Georgia, will use dorsaVi's OHS wearable sensor technology, ViSafe, to evaluate and define the best practice for workers using heavy material handling equipment.

ViSafe will monitor Caterpillar's workers to provide an assessment of the movement of their lower back, shoulder elevation and relevant muscle activity. The technology will evaluate and measure core components of manual handling, regular work tasks, recent workplace changes and contrast the new modified work stations against previous designs.

Based on the aggregated data from ViSafe and under the scope of the contract, dorsaVi aims to develop a plan to improve or modify equipment to increase workplace safety. dorsaVi will also assist in the planning of education and training in manual handling and the implementation of potential interventions.

Group OHS and Compliance Business Manager, Mark Heaysman, said: "We are thrilled to be expanding our OHS offering in the US and work with an industry leader in Caterpillar Inc. We are confident we can add significant value to their business and workers and we look forward to seeing the real-life benefits from the implementation of our innovative workplace changes."

"dorsaVi is combining established field based protocols with innovative technology, which informs strategic and financial decisions to improve workplace safety and reduce costs. The Caterpillar team has embraced our ViSafe technology and shared their vision for creating the safest workplace possible," he continued.

US dorsaVi President, John Kowalczyk added: "The signing of our first US OHS contract is a significant milestone and it is fantastic to partner with Caterpillar to create and define best practice for manual handling."

ViSafe consists of wearable sensors that are placed on the body to measure movement and muscle activity in the workplace. This technology enables employers to assess risk of injury for employees, reduce insurance-related costs, meet compliance, and test the effectiveness of proposed changes to workplace design, equipment or methods based on objective evidence.

About dorsaVi

dorsaVi (ASX: DVL) is an ASX company focused on technologies that captures and converts human movement into actionable, easily interpreted data for use in clinical practice, elite sports, and occupational health and safety. dorsaVi believes its wearable sensor technology enables – for the first time – many aspects of detailed human movement and position to be accurately captured, quantified and analysed outside a biomechanics lab, in both real-time and real situations for up to 24 hours.

Our technology has applications across three sectors:

- **Clinical:** ViMove is transforming the management of patients by providing objective assessment, monitoring outside the clinic and immediate biofeedback. ViMove is currently used by medical and allied health practices in Australia, New Zealand and the United Kingdom and is now available in the United States following FDA 510K clearance.
- **Elite Sports:** ViPerform is allowing coaches and medical teams managing elite athletes and teams to screen athletes and provide objective evidence for decisions on return to play, measure biomechanics and provide immediate biofeedback out on the field, tailor and track training programs and optimise technique and peak performance. ViPerform is being used by AFL and NRL clubs in Australia, clubs in the Barclays Premier League, Australian and Victorian Institutes of Sport, Cricket Australia and various Olympic teams and athletes internationally.
- **OH&S:** We combine innovation, measurement and quality to reduce workplace incidents, costs, meet compliance and improve brand reputation. ViSafe enables employers to assess risk of injury for employees as well as test the effectiveness of proposed changes to workplace design, equipment or methods based on objective evidence. ViSafe has been used by major corporations including Coles, Woolworths, Toll, Toyota, Orora (formerly Amcor), Crown and BHP Billiton. Australian Workplace Compliance (AWC) delivers risk mitigation through compliance to OHS, Quality Management Systems, Company Policy and Process.
