dorsaVi secures London Underground and VINCI Construction as its first UK occupational health and safety customers

Melbourne, Australia and London, UK: Medical device company dorsaVi Ltd (ASX: DVL) today announced the signing of its first two UK-based occupational health and safety (OHS) customers: London Underground and VINCI Construction UK Ltd. The agreements with the two industry leaders represent a major milestone for the Australian company who formally introduced its innovative OHS technology, ViSafe™, into the UK market in March this year.

dorsaVi's ViSafe™ workplace solutions utilises revolutionary wearable sensors to objectively measure human movement and turn it into actionable data. Together with safety conscious companies, dorsaVi finds solutions to reduce risk and associated costs.

The London Underground carried more than a billion passengers last year and is the oldest rapid transit system in the world. dorsaVi's ViSafe™ workplace solutions will provide Stations and Distribution Services, a division of TfL's London Underground with objective measurement and evidence based solutions to design ergonomically improved vehicles for current and future drivers.

VINCI employs 68,000 employees in 100 countries and VINCI is its UK branch that encompasses three divisions. VINCI will use ViSafe workplace solutions to objectively assess and document the impact of novel work practices and provide evidence of risk reduction among employees.

"The transportation and construction sectors are ideally suited to ViSafe" said Zoe Whyatt, dorsaVi Europe COO. "With the intensive manual handling and repetitive movements involved, these workers too commonly experience back and shoulder problems. ViSafe can change this pattern. By capturing real-time and real-world data, ViSafe consultants collaborate with companies to provide solutions to reduce workplace injuries and the corresponding costs."

Workplace injuries in the UK cost society £14.2 billion each year and result in more 8 million work days lost¹. dorsaVi is committed to helping companies find solutions to significantly reduce those costs, and improve productivity and worker safety.

The commercial details of the contracts are confidential.

About dorsaVi

dorsaVi Ltd (ASX: DVL) is an ASX company focused on developing innovative motion analysis device technologies for use in clinical practice, elite sports, and occupational health and safety. dorsaVi believes its wearable sensor technology enables – for the first time – many aspects of detailed human movement and position to be accurately captured, quantified and analysed outside a biomechanics lab, in both real-time and real situations for up to 24 hours.

Our technology has application across three sectors:

- **Clinical:** ViMove is transforming the management of patients, particularly in the area of chronic low back pain, by providing objective assessment, monitoring outside the clinic and tailored biofeedback. ViMove is currently used by medical and allied health practice in Australia, New Zealand and the United Kingdom.
- **Elite Sports:** Elite sports medical teams are using ViPerform to screen and assess risk of injury, take preventative action, optimize technique, improve athlete rehabilitation, and make better return to competition decisions. ViPerform is being used by AFL and NRL clubs in Australia, clubs in the Barclays Premier League, Australian and Victorian Institutes of Sport, Cricket Australia and various Olympic teams and athletes internationally.
- **OHS:** We combine innovation, measurement and quality to reduce workplace incidents, costs, meet compliance and improve brand reputation. ViSafe enables employers to assess risk of injury for employees as well as test the effectiveness of proposed changes to workplace design, equipment or methods based on objective evidence. ViSafe has been used by major corporations including Coles, Woolworths, Toll, Toyota, Orora (formerly Amcor), Crown and BHP Billiton. Australian Workplace Compliance (AWC) delivers risk mitigation through compliance to OHS, Quality Management Systems, Company Policy and Process.
