International architecture firm leads the way in compliance safety

Melbourne, Australia – Medical device company dorsaVi Limited (ASX: DVL) has today announced a new contract with international architecture firm DesignInc to assess and maintain its integrated management system. The three year deal will see dorsaVi work across the review and maintenance of the Integrated Management System.

DesignInc is an international architecture firm that employs approximately 150 people in various practices across Australia. The firm provides services ranging from architecture to interior design. Well known projects include the \$2.1B new Royal Adelaide Hospital, \$1.0B Victorian Comprehensive Cancer Centre as well as the architecture and urban design of Sydney's Chatswood interchange, in collaboration with Cox Richardson.

The contract will see dorsaVi's compliance team supporting DesignInc in maintaining its certification to ISO 9001, ISO 18001 and ISO 14001. The contract will also include dorsaVi reshaping the current quality, risk management, and environment management systems to be contemporary and business specific to DesignInc. This segment of the dorsaVi risk management business along with ViSafe, adds significant value to its existing clients while also driving new market segments to the business.

DesignInc's Sydney studio Managing Director, Sandeep Amin, said "Following a recommendation from a core team member, we contacted dorsaVi to review our existing compliance management system and update it to an efficient and user friendly process."

"It's been a pleasure to work with dorsaVi. Their major point of differentiation with other consultants is that they invest the time to truly understand our industry and then tailor their solutions to our specific needs. They understand our sector and more specifically, our practice."

dorsaVi will combine established protocols with innovative technology, to assess risk of injury for employees which will inform strategic and financial decisions to meet compliance and improve workplace safety.

Mark Heaysman, Group OHS and Compliance Business Manager at dorsaVi, said "There is a growing awareness in business that an ISO certified quality or risk management system assists greatly in reducing risk. This enables organisations to expose poor practise and reduce the risk of litigation or non-conformance to legislative requirements. It also greatly enhances the organisation's ability to capitalise on the implementation of corrective initiatives in OHS and risk management".

About dorsaVi

dorsaVi (ASX: DVL) is an ASX company focused on developing innovative motion analysis device technologies for use in elite sports, occupational health and safety, and clinical applications. dorsaVi believes its wearable sensor technology enables – for the first time – many aspects of detailed human movement and position to be accurately captured, quantified and assessed outside a biomechanics lab, in both real-time and real situations for up to 24 hours.

Our technology has applications across three sectors:

- **OH&S:** We combine innovation, measurement and quality to reduce workplace incidents, costs, meet compliance and improve brand reputation. ViSafe enables employers to assess risk of injury for employees as well as test the effectiveness of proposed changes to workplace design, equipment or methods based on objective evidence. ViSafe has been used by major corporations including Coles, Woolworths, Toll, Toyota, Orora (formerly Amcor), Crown and BHP Billiton. Australian Workplace Compliance delivers risk mitigation through compliance to OHS, Quality Management Systems, Company Policy and Process.
- **Clinical:** ViMove is transforming the management of patients by providing objective assessment, monitoring outside the clinic and immediate biofeedback. ViMove is currently used by medical and physiotherapy practices in Australia and the United Kingdom and is now available in the United States following FDA 510(k) clearance.
- **Elite Sports:** ViPerform is allowing coaches and medical teams managing elite athletes and teams to screen athletes and provide objective evidence for decisions on return to play, measure biomechanics and provide immediate biofeedback out on the field, tailor and track training programs and optimise technique and peak performance. ViPerform is being used by AFL and NRL clubs in Australia, clubs in the Barclays Premier League, Australian and Victorian Institutes of Sport, various Olympic teams and athletes internationally, and Cricket Australia.
